

iWord instructions

- Open image in Photoshop
- Save as “iName” on thumbdrive
- Create a new layer and hide the background layer by clicking on the eye (this layer is for backup only)
- Use magnetic lasso tool to lasso the silhouette
- Delete the silhouette (make sure to you are working on the copied layer)
- Paint bucket the image black
- Select inverse, delete background
- Create new layer
- Deselect everything
- Paint bucket a bright color
- Move layers by dragging so that background copy (black silhouette) is in front of the new bright colored layer
- Edit – free transform, to make image larger/smaller to desired position and double click
- Use zoom (apple +/- or zoom button on toolbar), and eraser tool to fix up the details...smooth out silhouette edges, paint back in some black details that got cut off
- Use text tool to add iWord. Decide on font, size, and placement. To go back in and edit text, you must click on the text layer
- Use the paintbrush tool to add minimal details. Be sure to be working on the right layer (silhouette layer or background layer)
